● PROBLEM & WHO'S AFFECTED

A missed call is a missed customer.

Small service teams can't answer every call — they're with a customer, it's after hours, or the line's busy. Those callers don't leave voicemail. **They call the next business.**

- Hiring a receptionist is expensive.
- Voicemail & IVR menus frustrate callers and capture **nothing useful**.
- Every unanswered call is a booking handed to a competitor.

WHO'S AFFECTED

- Dental & orthodontics
- Aesthetics & skin clinics
- Salons & barbershops
- Spas & wellness
- Physio & chiro
- Fitness & yoga
- Veterinary
- Home & auto services
- Professional services

Anyone phone- and appointment-led — where a ringing phone is lost revenue.

• OUR INSIGHT — WHY NOW / WHY US

Voice AI is finally good enough to **be** the front desk.

Why now

Real-time voice (Vapi) + capable reasoning (Claude) + cheap edge compute (Cloudflare) make a 24/7 receptionist affordable for one-location businesses — a first.

The insight

The hard part isn't the voice — it's the **backend that makes the conversation trustworthy**: real availability, no double-booking, clean isolated data, nothing lost.

Why us

We ship the backend + dashboard the agent calls into — strict multi-tenancy, dedup-by-phone identity, and a knowledge base — so it's grounded in each business's own truth.

03

One number that answers like your **best receptionist.**

Heard

Answered instantly, 24/7 — no voicemail, no hold music, no missed customer.

Assisted

Answers from the business's FAQs/docs; books, reschedules & cancels against **live** availability — read back to confirm.

Guided

When it can't close, it captures intent as a **lead** and escalates to staff — so nothing slips.

● Sign up

● 3-step onboarding

● Point a number / embed the widget

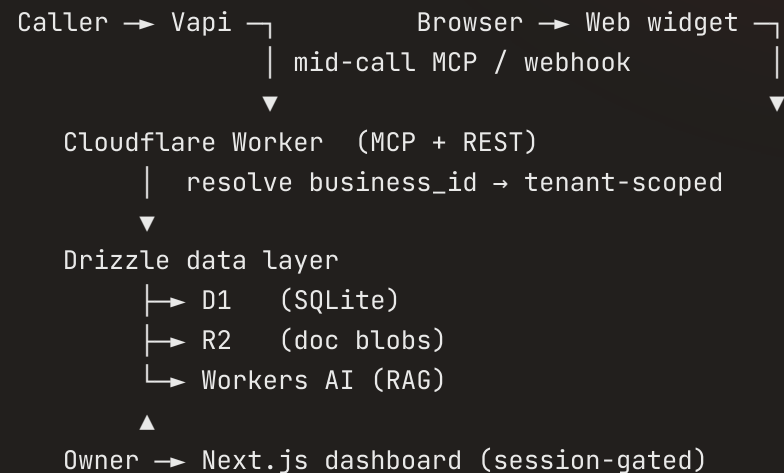

● Live in minutes

Owner dashboard: real-time calls with **AI summaries** · booking calendar · captured leads · KPIs & charts. *Try the live agent on the landing page — no signup needed.*

Edge-native. Multi-tenant. One data layer.

- **Models:** **Vapi** for real-time voice (shared assistant, multi-tenant at the edges); **Claude** for reasoning & tool use; **Workers AI** (bge-base-en-v1.5) for embeddings + doc conversion.
- **Data:** Cloudflare **D1** (SQLite/Drizzle, one source-of-truth schema); **R2** for doc blobs; knowledge-base **RAG** grounds answers in the business's own content.
- **Interface:** an **MCP server** (16 tools) *and* REST — both call the *identical* tenant-scoped queries. No duplicated logic.
- **Tenancy:** every query scoped by `business_id` from the **authenticated principal** — never caller input. No cross-tenant read path.
- **Auth:** PBKDF2 passwords + stateless **ES256 JWT** (worker signs, UI verifies locally).

Cheaper than a receptionist. Paid back by one booking.

24/7

WHO PAYS

The business owner — a **per-location SaaS** subscription, priced far below a part-time receptionist and justified by a single recovered booking.

GO-TO-MARKET

- **Self-serve** — sign up, onboard, embed; no sales call, no card. Try-before-you-buy live demo.
- **Vertical wedge** — start where calls = bookings = money: clinics & salons, then expand.
- **Land & expand** — single location → chains/franchises; partner with booking tools.

Shipped & working — **scaling next.**

Roadmap

- Per-phone_number → business routing for the shared inbound line.
- Live Google Calendar sync (schema slot reserved).
- Per-business assistants + live KB RAG injection.
- Scale-outs: Vectorize, ingest Queue, teams, billing, rate-limiting.

Risks & mitigations

- **Voice latency** → proven real-time platform; agent reads details back.
- **Hallucination** → grounded in the KB + structured tools; escalates rather than guesses.
- **Data isolation** → app-layer tenancy on every query; principal-derived business_id.
- **Adoption** → sub-minute onboarding + no-signup live demo.

SkipDesk — **stop letting the phone cost you customers.**
